Social Picnic, 1.00 p.m.
Rev. Mr. Sevior will conduct the services.

Rev. A. J. Law, B.A., Pastor

Sheep for Extra Income

There are few farms on the prairie where sheep with reasonable attention would not prove a definite asset to the farm income. Particularly in the wheat farming areas, farmers are in need of such side lines to provide extra returns most urgently needed in unfavorable crop years. Some additional fencing is required, but a few sheep may be pastured in small fields near the buildings until the profits will pay for more fencing.

Sheep will adapt themselves to varied conditions and require only an open shed in winter. They utilize low grade roughage in winter and from one to two pounds of whole grain per head daily will keep them in good condition. In summer they eat many of the common weeds, and if necessary can live on shorter pasture than most other kinds of livestock.

Each lamb is usually worth more on the market in the fall than its mother and it is not unusual to get a sufficient number of twins to average 15 lambs for each 10 ewes. In addition to the sale of lambs, the wool clip will pay for a good portion of the feed required. The wool clip at the Dom. Experimental Station, Scott for 1934 averaged nine pounds from Shropshire and 134 lbs. from Rambouillet. The wool was shipped to the Co-operative Wool Growers and has not been sold (Sept. 10), but when delivered a cash advance may be obtained at the time of shipment. The April lambs were sorted in August and the largest individuals were sold at \$4.10 per hundred after freight was deducted, which was more than double the price of good cattle at the time. An important consideration in regard to the returns from sheep is that the

Death of Mr. Macdonald, sr.

The death of Mr. Macdonald, sr., father of Hank Macdonald, occurred at Bindloss this morning. The funeral is to be held from Bindloss on Saturday.

Swedish Recovery

Advanced by Co-operation

Sweden is recovering from the depression faster than almost any other country in the world. "The Index," a magazine published by a New York trust company on "Sweden a Nation of Marked Economic Stability," points out that this recovery is largely due to the marked success of certain experiments in social planning and co-operative organization, and to the establishment of state monopoly and of managed currency." The article says that the Swedish co-operative union is in an exceptionally strong position and has contributed notably to the economic stability of the country.

The actual figures of Swedish recovery are as follows: Unemployment, May, 1933, 93,366; May, 1934, 67,455—a decrease of about one-third. Imports, May, 1933, 90.13 million kroner; May, 1934, 110.22 million kroner.

Sweden has approximately six and a quarter million people.

Note: In Canadian funds a kroner is just under 25 cents.

wool returns are available in June when cash is often scarce on the farm, and the early lambs may be sold before harvest when money is needed for the purchase of twine.

Grade ewes are quite satisfactory for the production of market lambs and by use of a pure-bred ram of another line of breeding a larger lamb is obtained than results from straight breeding. This has been confirmed at the Scott Station as well as the fact that such cross-bred lambs are not always satisfactory for breeding purposes, but should be sold on the market, and the original ewes retained as long as their teeth and lambing records are satisfactory, after which they may be sold for mutton, and other young ewes purchased.

Armistice Day Services

The usual ceremony will be held at the Centenap on Sunday, Nov. 11th at 10:45 a.m. to observe the "Two Minutes Silence" under the auspices of Imperial Order Daughters of the Empire.

It is hoped that as many as can will gather at the Centenap. Immediately following this an Armistice Service will be held the Anglican Church conducted by Rev. J. S. Parkes.

Managed Conventions?

The Liberal convention to be held in White, Alta., for the constituency of Cypress, on October 29, had to be postponed to November 10. Eight names came before the meeting for election. Five withdrew, the names of G. B. May, R. C. Black, and Mrs. E. Webster, were allowed to stand. However, a vote for a count of the ballots would be taken, the necessary ballot strength to the day in which the delegates had been selected.

The claim was made that in most instances the delegates had been appointed, instead of being elected by Liberal supporters in each polling subdivision. Mr. W. R. Howson, provincial liberal leader, was called on to settle the dispute, he declared, stating that as far as he was concerned there would be no objection from the delegation.

It was believed that the people of each constituency should have the say as to how to hold their convention. What happened at White in regard to selection of delegates who appeared at the Convention, is said to have happened at the Empress Convention. At any rate the allegation was made after the convention that delegates from the south constituency were chosen and not elected, and there was subtle dictatorialism. No criticism was made in this regard of Mr. Howson. The natural inference is that the liberal candidate will be minus a number of votes that he would ordinarily receive at election. Anyway, there was much resentment expressed following the convention. It would appear that when the same charges are made at two places as far apart as White and Empress.

In accordance with the appeal of the national committee, many of these cars have been filled by all churches participating and the railways have provided free transportation from point of loading to the final destination.

On the basis of 30,000 pounds per car, the total shipments to date are 27,700,000 pounds or 1,350 tons of food stuffs.

At conventions held on succeeding days, then it looks as if there is good reason for objections.

Bindloss Notes

Mrs. H. McDonald spent the weekend in Calgary with her daughter, Gladys and Misses M. Hutcheson and M. Arthur. Mrs. D. Galtup has returned from a visit with her brother and sister-in-law, Mr. and Mrs. Mark Chesney of Rocky Mountain House. She was accompanied home by her little nieces, Donna and Dorothy, who will spend a holiday with their grandparents, Mr. and Mrs. Thomas Chesney.

Miss Thurna Luck has returned to her home in Calgary.

Mr. B. and Miss Doris Hall, spent the week end in Calgary. Mr. and Mrs. Norman Davies, and small sons, George and Bill, visited Mrs. Davies' parents, Mr. and Mrs. Jackson, of Estuary, over Sunday.

Mr. Sig. Fjeldberg has returned from a trip north to Red Deer and Watkiwain.

The marriage of Miss Laura Barros and Mr. Harvey Baugus is reported to have taken place in Calgary this week.

Messrs. Hughes and Walter Peters are engaged in putting a ceiling to the Bindloss hall.

Formation of the National Association for Credit Control, described as a nation-wide movement to promote the creation of a central bank, has begun in New York.

A statement issued by the association reads in part:

Registration of Poultry To Commence in Alberta

Edmonton, Oct. 28—Registration of all poultry in the Province will be commenced immediately as first step in the organization work by the Alberta Poultry Marketing Board, it was decided at an organization meeting of the board in Edmonton Thursday.

Application of the conditions of the marketing scheme for Alberta cannot be commenced until final approval of the plan has been given by the Federal Marketing Board. The federal body has tentatively sanctioned the scheme, but will not definitely pass on it until after Nov. 15, named as closing date for protests to the scheme. The board will take immediate action to put the regulations into operation following final approval.

Form National Association Of Credit Control

Formation of the National Association for Credit Control, described as a nation-wide movement to promote the creation of a central bank, has begun in New York.

A statement issued by the association reads in part:

Sunday, Nov. 4th:
Carolinian, 11.00 a.m., Hymn
Communion.
Ainslie, 2 p.m., evensong and
sermon.
Eucharist, 4:30 p.m., evensong
and sermon.
Empress, 7:30 p.m., Evensong
and sermon.
Rev. J. S. Parkes, Vicar-in-
charge.

CARD OF THANKS

The Ladies of St. Mary's W.A. wish to thank all those who sent donations or helped in any way to make their tea and Bazaar a success.

Married Peoples' Club

Hold First Meeting

The Married Peoples' Club held their first card party and dance of the season, on Monday night. Carl Gill was the prize at cards. There was a good turn-out to the dance. The event was free.

Italy To Inaugurate

Corporative State

A revolutionary profit-sharing scheme for Italian agriculture, embracing land owners and farm workers, is to apply in Italy, according to recent on-
board there.

The system contemplates: Distribution of farm profits and products on a percentage basis; employment of more farm workers; equal distribution of work; elimination of overtime work and farm labor by women and children.

Owners of farms, it was explained, will not lose their status of proprietors. Owners are to be assigned a percentage of profits corresponding nearly as possible to their earnings under the present system. An official interpretation of the plan said, "it places capital and labor on an equal basis."

Is There Merit Here?

The Alberta Pool Elevator system has enjoyed a high reputation among grain growers of the province and the organization is making every effort to justify the confidence bestowed. Its aim is to give courteous, efficient and equitable treatment to all patrons.

Grain growers will find the Alberta Pool Agent anxious to obtain and merit your business.

Wheat Drive In Ireland

De Valera Government Insists On Farmers Growing More

Irish farmers must grow more wheat. If caption fails, Eamon De Valera's government will try coercion. A cajoling campaign is now in full swing, the dail having voted \$50,000 for propaganda.

Every one of the 1,600 political clubs in the Fianna Fail party will pull its weight in the big drive to encourage farmers to grow more, unpatriotic to allow land to be fallow, and behind the campaign is the veiled threat that landowners who fail to do their part will be deprived of their property.

Under a new scheme of rating relief coming into operation at the instance of the department of local government, rebates will be allowed to farmers in their taxes corresponding to the amount of land made persons they have on their farms.

The newly-instituted propaganda campaign lays emphasis on the protection of the home market for wheat, estimated at \$17,000,000,000, that is, 100 million bushels of milled wheat grown at home at a guaranteed price of \$6 per barrel—much higher than the world price. The guaranteed price may not be changed except by giving two years' notice to growers.

In 1932 Free State farmers grew only 20,000 acres of wheat. This year they need 90,000. The government is impatient with the delay and says it will not wait for the present rating relief to be applied. It would take 80 years to reach the \$600,000 acres required for the home market.

From the repeal of the corn laws in England in 1846, 100,000 acres of wheat beat the importation of cheap wheat grown on the virgin soils of North America, particularly Canada, killed the Irish trade almost overnight. This is the government's answer to critics who say the Irish climate is unsuitable for the crop.

Reciprocal Trade

Hon. Vincent Massey Thanks Canadians Would Welcome Wider Markets

The last comes, welcome arrangements for reciprocal trade with the United States. Hon. Vincent Massey, formerly Canadian minister at Washington, told the New York Herald Tribune conference on currency:

"It is not when the time comes," he said, "the Canadian people will welcome arrangements for reciprocal trade with the United States. If we devised they can only be of mutual advantage to ourselves. We are rightly proud of some of the international traditions which we have been able to establish in North America. Let us add one more and prove to the world that there can be at least one island of commercial stability in the North American continent."

Mr. Massey said there was nothing incompatible between increased trade with the empire and increased trade with the United States. "It is not fair to the empire," he said.

"There is a growing disposition discernible here and there to question the validity of the belief that to purchase goods from foreign sources is an infringement of the moral code."

Sold For Meals

A business lot in the city of Macau, Virginia, once was sold for three square meals a day for seven years. Court records show that 40 years ago Thomas C. and E. F. Mims for a bit more where the city auditorium now stands. The meals were valued at \$100 a year or slightly less than 10 cents each. The total consideration being about \$700.

A Real Expert

Witness at Highgate Police court, asked if he could drive a motor-car: "Oh, yes. All you have to do is start the works, shove it into gear, grasp the steering wheel, hold tight, and hope for best." You also have to shoot at pedestrians, bat petrel and mend punctures, but that comes with experience."

Belonged Anyway

"Yes," said the candidate. "I'm going to tell the truth, anyway, to a cattle show or Jackasska show, something of that sort; not that I care for cows and jackasses, but I want to show the people that I'm one of them."

Two English trains provide train-typists for busy business men.

A simplified process for coating plastics with metal has been found.

REVOLUTION THREATENS IN SPAIN AS PARTIES CLASH

With a general strike of workers spreading rapidly through Spain's industrial centres, and the provinces seething in rebellion, the Spanish government is sitting in wait to call an effort to cope with the serious situation. At the top is a picture of the Plaza Catalunya, most important centre in Barcelona where demonstrations are inciting the people to revolt. Below, loyal troops in Bilbao search citizens for arms in order to possible bloodshed.

Explanation Was Simple

Lonely Grocer Had Brilliant Idea Which Netted Profit

In one of those little towns in Maine, as in the rest of them, probably, the summer residents all trade at the local grocery store and it's the custom to go to the store for the bread and then, upon departure, pay it in a lump. A city man who bought a place there last summer and followed this practice was surprised during the winter, long after his return, to find the grocery store closed. He didn't do anything about it at the time, beyond getting out his cancelled checks and verifying his recollection that he'd paid it, but the custom had been so general that, afterward, the first thing he did was call at the grocery. The old man who ran the place was still, but his son was there and the son was a little absent-minded and he didn't put up with that. After some hard words he beckoned the city man to the rear of the store and whispered the explanation. "It gets mighty lonesome up here sometimes in the dead of winter," said the grocer. "Paw goes to all the local stores and sends out to all our summer customers. You'd be surprised the number of them pay up again!"—The New Yorker.

Taking No Chances

Woman Has Expensive Handbag To Scare Away Burglars

A woman in London, England, has just paid \$250 for a handbag—to play one record only.

When it is played, a dog's bark is heard, followed by a man's cry of "Who's there?"

The purchaser is a widow, living with an elderly maid in a district which had had epidemics of burglaries.

Her new radio telephone loudspeakers will be installed in every room, the radio phone will be connected with "invisible light" alarms across each window, and any would-be thief will get the shock of his life if he tries to enter.

Boat Built Of Salt

Highways of iron are being tested in some parts of the United States and now comes word that a road of salt, the first of its kind to be built in Canada, is to be built by a salt company with works at Sault Ste. Marie, Ontario, on the north end of the seventh concession of the township of Anderson. This new-type road is being established as an experiment to determine the use of the company's coal oil the company furnishing the material.

Real Progress

The Ottawa Journal says: "The Daily Express reproduces a photograph of the first fatal motor car accident in Britain. A funny-looking auto running down a hill got out of control. The driver and a passenger were killed. That was in 1899. Last year says the Express, 223,530 people were killed and injured on the roads of Britain."

Find New Market

Canadian Onion Well Received In British West Indies

A new challenger in the onion export field has thrown down the gauntlet. For a number of years the bulk of the onions imported by the British West Indies from the United States, Holland, Portugal and Argentina. Recently, however, Canadian onion growers have had a surplus available for export to the West Indies territories and their products have been well received. The British Economic Committee's 27th report on Canadian seeds, to avoid such terms as "persistant," "leafy," "hardy," and the like, some of which do not always mean the same thing, has recommended a hardy strain means a strain capable of resisting extremes of heat. In Canada, on the other hand, the term denotes a strain capable of resisting extremes of cold. It is impossible, say the experts, to resist the coming of winter in the West Indies market late in October and continue until the end of January. This exacting period coincides with the time of the Dutch supply, so it is all the more to the credit of the quality of the Canadian onion that it can break through such severe competition.

Ancient Map Found

Showa City, Old Old London Was Once Marsh Land

Much of the present city of London, England, is shown as marsh on a 218-year-old map in possession of M. E. H. Littlebury of Vancouver. Only the name appears on the map. The lettering is in the old style with the letter "F" taking the place of "S". A modern version of the text would read:

"A new map of London, much having been added to the Right Worshipful Sir Peter Deline, K.T., and aldermen of London, 1720, revised by M. Seely."

Mrs. Littlebury has had the map for some years but only recently rediscovered it after having placed it away in a book.

Heritage Worth Cherishing

Language of Canada Is One Of Her Finest Possessions

This is a plea for the protection of one of Canada's finest possessions—her language. In the English language, Canadian English has indeed a great power of expression, comprehensive, flexible, powerful, beautiful. It is capable of expressing the finest shades of meaning, every mood and emotion. And yet, like a pianist strumming forward on two or three keys with which he is most familiar, the language has its own people to whom it almost always is "good" or "well". The individual who remarks that he is not "feeling so good to-day" and who thinks he means "not well" would be startled if his hearer took his words at their correct meaning and perhaps advised him to see his minister about his "badness". It is difficult to know just what cause such an expression may have, but such words are extremely common. Perhaps it is lack of thought. It is plain to everyone that "don't" is a contraction for "do not" and while practically no English-speaking Canadian would be guilty of saying "don't" without meaning "do not" yet the "don't" is heard infrequently.

Lack of imagination, lack of thought and just carelessness all have a part in the abuse of one of Canada's greatest possessions. Legal machinery protects the beauty of Canadian parks and protects her magnificent natural resources, but it rests with the individual to guard the beauty of her language.—St. Thomas Times-Journal.

Names Go In Cycles

Certain Ones Have Run Especially Those For Girls

The list of Canadian names compiled from English public school records shows, rather surprisingly, that the name John is a very easy winner in popularity. Seventy years ago John was only fifth on the list, but the term denotes a strain capable of resisting extremes of heat. In Canada, on the other hand, the term denotes a strain capable of resisting extremes of cold. It is impossible, say the experts, to resist the coming of winter in the West Indies market late in October and continue until the end of January. This exacting period coincides with the time of the Dutch supply, so it is all the more to the credit of the quality of the Canadian onion that it can break through such severe competition.

Something Worth Knowing

Cool Dry Weather Is Best For An Operation

To have your appendix out with the greatest safety, pick a dry period for the operation, and not too hot.

That is the finding of a research which was described to the American Hospital Association by Dr. Clarence A. Mills, professor for experimental medicine, University of Cincinnati.

Peaks of several of the leading causes of death in the United States were attributed to weather. Dr. Mills predicts that hospitals will use air conditioning to produce artificial climates to combat disease.

"Most heat," he said, "that decreases the resistance and defense of the body to infection, is due to an increased susceptibility to infection and lessened ability to fight bacterial invasion, once they have gained a foothold."

In this respect between the more active people of the north and the southerners of more sluggish metabolism. Of each 100 cases of acute appendicitis admitted in hospitals, the fatality rate is almost twice as high in the south, with a steady lowering of the fatality rate as one goes northward from the gulf region.

"Hospital practice in the north would not be difficult in providing any type of artificial climate a surgeon might desire for particular purposes. Portable equipment could be moved from room to room for heating, cooling, adding moisture or drying the air."

Strength Of Wool

Will Stand Up To Stretching Without Being Broken

There are over 200 kinds of knitting wool, ranging from sturdy yarns for heavy garments and socks to delicate threads in which a baby is wrapped. The finest wool is clipped from a healthy sheep at the appropriate season of the year; clipings from the skin of a dead animal are inferior. The art of blending, or combining, different qualities to produce a uniform quality is a science for particular purposes, just as the dyeing is the outcome of the very latest research in the chemical laboratory. Wool fiber weighs less than any other fiber of equal dimensions, so that wool is light to wear. It is remarkably elastic, for a fiber can be stretched to over 70 per cent of its original length without breaking, and will immediately return to its original size when released.

A woolen garment is strong because the single hair has the same tensile capacity as a golden wire of the same diameter.

In search of a metal lighter than aluminum, scientists are experimenting with magnesium sulphate, or epsom salts.

An egoist is a man who always thinks about himself when you want to talk to yourself.

Good Roads To National Parks

Program Of Highway Improvement In Alberta

Three of Canada's greatest national parks, with an area exceeding 7,000 square miles lie along the eastern slopes of the Rocky Mountains in the province of Alberta. The great effort is being made to maintain these parks in the beauty with which nature endowed them, but, of course, roads are essential, and splendid highways have been built and to connect the provincial highway system, which, in turn, connects with all the continent.

An extensive program of highway improvement, and further improvement in the national parks of Alberta have been recently announced. Highway improvement and construction plans include the completion of the motor highway from Edmonton to Jasper National Park as an all-weather road, the reconstruction of the section of the Canadian-Banff Highway west from Cochrane into the park, which will put this highway in excellent condition for motor traffic, and further construction on the new mountain highway connecting Jasper National Park with Banff Park at Lake Louise.

Plans within the national parks include the highway construction in Banff National Park, the Jasper Park, an all-weather landing field in Banff Park, and general improvement of facilities in these parks, as well as improvement of facilities of Elk Island Park east of Edmonton and the eastern part of the Alberta Rockies, including \$70,000 to be spent towards the completion of the new international highway connecting Waterton Lakes Park with Glacier Park in Montana. A good part of the construction highway past the mountains from Banff to Jasper is now completed from both ends, and the entire road is expected to be finished in the next two seasons.

Next year, as 43,972 automobile passengers through the gates of Banff National Park between April 1 and August 31 of the present year, an increase of 2,750 over the same period in 1933.

Life's Darkest Moment

The Wall Street Journal relates the case of the old gentleman who was telling about the experiences of his life.

"I had some terrible disappointments, but none stands out over the years like one that came to me when I was a boy," he said. "What was it?" asked a listener.

"When I was a boy I crawled under a tent to see the circus, and I discovered that it was a revival meeting," he said.

Another Stratosphere Flight

Prof. Auguste Piccard said in a speech in New York that he planned to attempt a 100,000-foot balloon ascension into the stratosphere next year. He said he was working on the technical aspect of such afeat and was preparing plans for the flight.

"I am going to rise to a height of almost double that which he reached," he said, "and I am going to rise to a height of almost double that which he reached," he said.

When he reached a height of 53,000 feet,

The ENERGY VALUE of Cod Liver Oil PLUS SPEEDY ASSIMILATION

With emulsified oil digestion begins at once in the stomach. Ordinary oils must first combine with the pancreatic juice—to form an emulsion—before they can be assimilated.

Scott's Emulsion is quickly and easily assimilated, and Scott's Cod Liver Oil beats all others in assimilation. Scott's Emulsion is rich in body-building hypophosphites of lime and soda—PLUS values you get in Scott's Emulsion of Cod Liver Oil.

WILD GESE ARE ASKED A QUESTION?

By MARGARET WADE

The whole history of the progress of mankind is the history of the way that the questions asked by its more alert and enquiring minds and much among them, the questions that have ultimately rewarded their persistent search and research. Always Nature has been the teacher.

In our own times, Edison, concentrating on the one line that interested him, asked a question concerning electricity, and as a result gave us an instance, light without candle. He, too, in his more concerned primary interest in mechanics, gave us motorized vehicles. Dr. H. C. St. John, Dominion scientist, had certain questions to ask concerning the growth of grain in varying climates and as a result of his experiments and his experiments gave us Marquis wheat. Dr. Banting, in pursuing his researches gave insulin to a suffering world.

In much the same way Jack Miner has been the teacher of man, especially relative to the habits of wild animals, migratory birds and water-fowl. The animal kingdom, too, has given us many contributions resulting in the preservation of certain types of wild life that have been threatened with extinction, in designs for the scientifically arranged and safeguarded preserves, and in the valuable information relative to the migratory habits of wild fowl and various other related subjects.

It is not claimed, of course, that Jack Miner has been alone in this field of research, foraging, caring for and unpacking what the trappers had to do each summer before they became modernized and "took to the air."

In the old days the trappers went in by canoes, which they abandoned in the spring when they came out with dog teams. This necessitated a canoe each year, so that they canoes to fly in, a process which was cheaper than an overland, being avoiding a month's hard work, avocation officials have revealed.

Trappers And Huskies Transported By 'Plane

Former Month's Journey Now Made

Flight of 40 hours, seven trappers and 14,000 pounds of supplies and equipment into the remote Barren Lands east of Fort Reliance on the eastern shore of Great Slave Lake, and back Pilot Conway Farrel, Canadian Airways Pilot, recently.

Each flight into the barrens is made in an average time of one day, a flight, consisting, of course, of a month's work, trapping, caring for and unpacking what the trappers had to do each summer before they became modernized and "took to the air."

In the old days the trappers went in by canoes, which they abandoned in the spring when they came out with dog teams. This necessitated a canoe each year, so that they canoes to fly in, a process which was cheaper than an overland, being avoiding a month's hard work, avocation officials have revealed.

"DON'T TAKE CHANCES WITH
INFERIOR QUALITY. LESS THAN
1¢ WORTH OF MAGIC MAKES
A FINE BIG CAKE. AND MAGIC
ALWAYS GIVES GOOD RESULTS."

MAGIC costs so little—and you can always get good results. Actually it takes less than 1¢ worth of baking powder to make a big three-layer cake. Don't risk poor-quality cakes by using inferior baking powder. Always bake with Magic and be sure!

"CONTAINING NO LUMI" This means that every little bit of Magic Baking Powder is free from all unnecessary ingredients.

MAGIC
MADE IN CANADA

THE TENDERFOOT
By
GEORGE B. RODNEY
Author of "The Coronado Trail",
"The Canyon Trail", Etc.

SNYOPSIS

"You've fallen heir to a half-share in plenty of trouble," the lawyer told Gerald Keene. "The Broken Spur has been sold to a Mexican bandit, and old Joe Carr, your partner, is drinking himself into ruin."

But the boy wanted to see what was happening for himself. So he and Gerald Keene, half owner of the Hour-Glass Ranch, and his friend, Dusty Stone, tenderfoot in a Montgomery Ward westward outfit,

Dusty, the half-fat and luckless prospector till now, is returning to tell Dustin and Spike Goddard, owners of the ranch, what has happened. Spike had commented on his known conduct at a Mexican dance and on a household that he maintained in Sepulveda. Dustin raised his hat and stepped up to her.

"Aren't you going to tell me what you saw her when you eyes were opened. She was coming out of the post office in Seco and he, about to enter, stood as though paralyzed by the sight of her. She was the most beautiful girl he had ever seen and he was suddenly aware that the uniformed girl had developed almost overnight into the perfectly formed woman men were openly coveting."

It was a full two years since Dustin saw her when his eyes were opened. She was coming out of the post office in Seco and he, about to enter, stood as though paralyzed by the sight of her. She was the most beautiful girl he had ever seen and he was suddenly aware that the uniformed girl had developed almost overnight into the perfectly formed woman men were openly coveting.

He had seen enough not to try to force his attentions on her. He told old Joe Carr too well that for years that held their womenfolk sacred. The man must be better than ordinary to get his legs under old Joe Carr's table where the pretty Edith sat. That was also the hour of greatest trouble for the Hour-Glass ranch.

It was a big ranch. For miles its wire fence wound into the hills and its broad ranges pastured many cattle. But the dogged old doggerel of Carr's narrow house, the old best dropped nine dollars! Then to the side of it, then a bucking pony stampeded him against a bucking-post in the corral and broke his leg in two places. The break healed imperfectly. It had been a week since the accident and the irritation over being a cripple had awoke the old fever that had never really subsided since Edith's arrival. The ranch had been the great bairing-ground under the great cottonwoods—cottonwoods.

From day to day Edith tried gallantly to stop that solitary drinking. She saw her father go into the office after supper, then the door closed and she knew only too well what was taking place behind that closed door.

The loafers at the office-door did not hear his words but they saw him drop into step with her and they nudged each other. Then they saw the old man and drooped his head. There was not a single word they heard from him with the whirr and snap of a whip-lash.

"The street is open to the public, I believe," she said. "When I walk with one and one it will not be with a 'squaw man'."

That was all. Dustin, the big man

of the Broken Spur, dropped back. His face was white with wrath and his lips were set. The men who saw it all never said a word, but in their hearts they knew he was after that word spread. They watched him snatch his horse from the tie-rack and they preserved the silence of the damed till his horse was swallowed up in a cloud of dust.

"One more set fire to his shirt-tail!" quoth old Style. The others giggled uncomfortably. They knew Dustin fairly well.

Saint Dustin, neither forgave nor forgot that incident more than once and old Joe had preserved never but no opportunity came his way. But his encounter marked Edith Carr as the only person in the Valley worth the name and paid her a visit and Dustin was forced to himself that tame she should some day be him. That day he would bring her to heel.

He had seen enough not to try to force his attentions on her. He told old Joe Carr too well that for years that held their womenfolk sacred.

The man must be better than ordinary to get his legs under old Joe Carr's table where the pretty Edith sat. That was also the hour of greatest trouble for the Hour-Glass ranch.

St. Paul's Cathedral

Edifice From Encroachments of Modern Commercialism

Commercial progress has been made during recent weeks with a scheme for surrounding St. Paul's Cathedral with a "sacred area" within which no deep excavations would be allowed which might endanger the shallow foundations of the building.

Such a scheme was first proposed in 1912, but nothing much came of it on behalf of the cathedral authorities, and it was later given up by Lord Mayor in testing the corporation to help in protecting the cathedral.

The matter was referred to a special committee of the corporation, and the corporation have now come to the conclusion that the scheme is necessary for the protection of the cathedral.

The special committee have recently been drafting a Bill to establish the controlled area. Though the details of the Bill are not yet available, it is expected that it will be submitted to the House of Commons in November and become law next spring.

The editor of the journal of the Architects' Institute remarks that "the acceptance of this scheme, for which Canon Alexander has striven for many years, is of significance not only for the cathedral, but also for the city of St. Paul, which has been a leader in the introduction of modern commercialism."

With meekness, humility, and diligence apply yourself to the duties of your condition. They are the seemingly little things which make no noise that give success—Henry More.
